## **Hydro Fold Unveils Innovative Foldable Squeegee at ISPA Home Show Chicago 2026**

Hydro Fold, an innovative new cleaning solution designed to improve everyday floor maintenance, will be showcased at the ISPA Home Show in Chicago. Developed to modernize a long-standing household and commercial cleaning tool, Hydro Fold™ introduces a foldable, ergonomic squeegee that makes cleaning faster, easier, and more efficient.

Hydro Fold reimagines the traditional floor squeegee by integrating a smart folding mechanism that allows users to scrape liquids and debris, then easily fold the rubber blades to trap dirt and water in place for quick disposal. This unique design significantly improves cleaning performance while reducing physical strain during use.

The product features a lightweight yet durable structure, an ergonomic handle designed to minimize back strain, and high-performance rubber blades that efficiently remove liquids without leaving residue. By allowing users to clean larger areas in less time, Hydro Fold™ helps save both effort and energy, making it ideal for residential, commercial, and professional environments.

“Traditional squeegees have remained virtually unchanged for decades,” said Shamim Sasanpour, inventor of Hydro Fold. “Based on real-world experience and everyday cleaning challenges, I wanted to create a smarter, more ergonomic tool that improves efficiency while protecting users’ comfort and health. Hydro Fold is designed to work with the user, not against them.”

Hydro Fold is suitable for use in kitchens, bathrooms, restrooms, hallways, offices, restaurants, parking areas, and other indoor and semi-outdoor spaces. Its foldable design makes it especially effective for trapping liquids and debris, preventing mess spread and reducing repeated cleaning passes.

The product is currently patent pending and available for licensing opportunities. Visitors can learn more about Hydro Fold and see live demonstrations during the ISPA Home Show in Chicago.
