ergo-ware Debuts Revolutionary ErgoCup at The Inspired Home Show 2026

Adaptive Drinkware Innovation Takes Center Stage in Inventors Corner

Breakthrough design eliminates grip strain for individuals with arthritis and limited hand mobility

CHICAGO, IL – March 2026 – ergo-ware, an innovative adaptive drinkware company, is proud to announce the debut of its groundbreaking ErgoCup at The Inspired Home Show 2026 in the prestigious Inventors Corner. The ErgoCup represents a paradigm shift in accessible drinkware design, offering a hands-free drinking experience for individuals with hand mobility challenges, arthritis, and limited grip strength.

A New Standard in Adaptive Drinkware

The ErgoCup features ergo-ware's proprietary Helve Grip design, which curves over the back of the hand, allowing the cup to hang effortlessly without the need to grip or squeeze. Users simply slide their hand under the open handle with their palm facing the side of the vessel—similar to extending a handshake—and the cup naturally rests in the contour of the hand.

"We've reimagined how people interact with everyday drinkware," said a representative from ergo-ware. "The ErgoCup eliminates strain while maintaining full control, allowing your fingers, hand, and wrist to stay in a neutral, natural position that supports joint protection principles."

Thoughtful Engineering Meets Universal Design

The ErgoCup incorporates several innovative features designed with both functionality and safety in mind:

- **Ergonomic Shape:** Fits the natural contours of the hand, keeping fingers, wrists, and hands in a neutral, relaxed position
- **Double-Walled Construction:** Increases durability while ensuring the exterior remains comfortable to touch, even with hot beverages
- **Wide Opening:** Ideal for individuals with limited neck mobility, allowing for easier drinking
- **Slow Flow Design:** The curved bowl shape controls liquid flow, while a slight lip on the edge helps minimize spills

Making Daily Living Effortless

The ErgoCup addresses a critical need in the market for drinkware that doesn't compromise independence or dignity. By eliminating the traditional gripping motion, the ErgoCup makes every sip comfortable and effortless for users with arthritis, reduced grip strength, or hand mobility limitations.

Meet ergo-ware at The Inspired Home Show

Attendees of The Inspired Home Show are invited to experience the ErgoCup firsthand at the Inventors Corner this March. The ergo-ware team will be available to demonstrate the innovative design and discuss how the ErgoCup can transform daily living for millions of individuals seeking greater independence and comfort.

About ergo-ware

ergo-ware is dedicated to creating adaptive solutions that promote independence, comfort, and dignity in daily living. Through thoughtful design and engineering, ergo-ware develops products that address real-world challenges faced by individuals with mobility limitations, making everyday tasks effortless and accessible.
