Father-Daughter Inventors to Showcase Utility-Patented Stand Alone Luggage at The Inspired Home Show 2026

Midland, MI – February 23, 2026 – Co-Founders and Inventors Norman Gadzinski and Gina Provenzano today announced that their utility-patented **Stand Alone Luggage (SAL)** will be exhibited in the Inventors Corner at **The Inspired Home Show**, March 10–12, 2026, at McCormick Place in Chicago, Illinois.

Stand Alone Luggage is a game-changing travel innovation that converts a suitcase’s standard extendable handle and wheels into an integrated, built-in support stand. With one simple pull-and-push motion, the handle and wheels glide along molded tracks, flip downward, and lock securely via the patented hinge mechanism. This creates stable legs that elevate the bag completely off the ground—keeping it clean, accessible, and truly self-standing—without added racks, legs, or attachments.

“Stand Alone Luggage transforms travel by keeping dirty suitcases off beds, floors, or wet ground—no more bending to pack or struggling with limited hotel stands, especially when traveling with others,” said Gina Provenzano, Co-Founder and Inventor. “It offers easy access for elderly or mobility-challenged travelers and doubles as a handy table during airport delays. We’re thrilled to demonstrate it to buyers, licensors, and media at The Inspired Home Show.”

Key benefits of Stand Alone Luggage include:

- **Superior hygiene** — Elevates the bag away from dirty floors, airport surfaces, wet camping areas, and other unclean environments.
- **Comfortable access** — Enables upright packing/unpacking at standing height—ideal for elderly travelers, those with mobility issues, or anyone avoiding bending or floor-sitting.
- **Multi-purpose convenience** — Doubles as an impromptu table or workspace during airport delays or travel waits.
- **Manufacturer-friendly** — Engineered for efficient, low-labor production with proven materials and standard manufacturing processes — while maintaining comparable weight and cost to conventional luggage and simplifying assembly.

Attendees are invited to visit the Inventors Corner to see SAL in action, meet the inventors, and explore licensing, partnership, or collaboration opportunities.
