

Volume Brands launches the Glad Link & Sort Recycling Station designed to inspire responsible waste disposal and foster sustainable living.

Glad Link & Sort is an Innovative recycling station for homes and offices, streamlining waste segregation. Made with 100% recovered plastic, Link & Sort connects multiple cans to allow for appropriate recycling or compost purposes with use of stickers (provided) for easy sorting of waste. The Clorox antimicrobial protection of the lid inhibits growth of bacteria, mildew and odors. It has a hinged lid for easy disposal of bulky trash so there's no need to remove the lid to throw a box of pizza. This innovative solution simplifies recycling, and because it's made with 100% recovered plastic, we are initiating small steps towards improving our environment footprint. Embrace the future of waste management with Glad Link & Sort for responsible waste disposal. Available in 2- or 3-unit stations, or connectable singles.

Selected as a finalist for Sustainable Products in the IHA Global Innovation Awards (gia) for Excellence in Product Design, the Glad Link & Sort enable action towards sustainability -- a small change that collectively makes a big difference.
